

Is utilization of a data center the right choice for my business?

The Why

Because bad things happen. Because your data is critical to running your business. And what good are your applications without the data? Protecting IT assets is essential to business continuity. Ask yourself, “what would I do without access to my data, my applications, my communications? Where does that leave me?”

The How

That’s easy, use a data center. Whether you colocate your own servers and networking equipment, utilize dedicated servers to replace company owned gear or design a backup and disaster recovery plan for extenuating circumstances, a data center provides the security, continuity and reliability businesses need to stay up and running during normal business operations or in a crisis.

The Benefits

Benefits come in different forms. Whether its easily measured and quantifiable financial benefits or intangibles like peace of mind, a data center can provide significant ROI under the right circumstances. Typical office space or even an on-site server room won’t provide the built in security, redundancies and resiliencies of a modern data center.

It’s not just your data...it’s your business.

Features

Selecting a data center or colocation provider is a big decision for your business. After all, you'll be housing your mission-critical infrastructure within someone else's facility. Before you make a selection there are a number of criteria you should take into account:

Security

- Biometric and Pin Code Authentication
- HD Night Vision Camera System
- Private Cabinets or Cages

Power

- Backup Diesel Generator
- Uninterrupted Power Supplies (UPS)
- Power Distribution Units (PDU)

Continuity

- Service Level Agreements
- Redundant Power Systems
- Multiple ISPs

Cooling

- Hot/Cold Aisle Design
- High Capacity HVAC
- Outdoor Cooling Economizer

Building

- 24/7/365 Controlled Access
- Concrete Structure with Steel Beams
- Non-Descript Facility

Connectivity

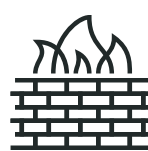

- Carrier Neutral
- Regional and National Carriers
- Fiber Connections

Location

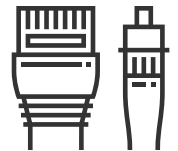

- Low Risk Disaster Zone
- Centrally Located to Metro Areas
- Adjacent to Local Police and Fire Depts

Fire System

- Integrated Early Smoke Detection System
- FM200 Clean Agent fire suppression
- Central Station Monitoring Service

Bandwidth

- Dynamic BGP routing
- Redundant Routers & Switches
- Network Monitoring

It's not just your data...it's your business.
